

■ GitHub Repositories to Boost Your Hackathon

4 useful open-source repositories to find tools, APIs, ideas and resources — and build faster during your next hackathon.

#1 — hackathon-tools

A curated collection of tools that can help hackathon builders with development, design, deployment, productivity and more.

Best for: discovering useful tools before and during a hackathon.

■ [Open GitHub Repository](#)

#2 — Public APIs

A huge community-maintained list of public APIs covering many categories. Useful when your project needs data or an external service.

Best for: adding real-world APIs and data to prototypes quickly.

■ [Open GitHub Repository](#)

#3 — hackathon-projects

A collection of hackathon project ideas and resources designed to help you explore concepts and kick-start your next build.

Best for: finding inspiration when you are stuck on what to build.

#4 — hackathon-tools (alternate link)

The same hackathon-tools repository link supplied for this guide, included here so the PDF keeps all four requested links visible and clickable.

Best for: keeping your essential hackathon toolkit bookmarked.

■ Hackathon Tip

Don't copy projects blindly. Use these repositories to discover ideas, understand existing solutions, find useful tools or APIs, and then build something original around your problem statement.
